Excerpts from "The Day Kennedy Was Shot" concerning notes at the JFK autopsy 12/7/68 P.L.H.

Page 452: "The doctors began to speak their observations; notes were taken."

Page 472: "They (the gentlemen of science (i.e. the doctors -P.H.)) made small and sometimes indecipherable notes on [redacted] pads."

(Page 482: Concerns signing of the autopsy authorization by RFK.)

Page 513: "Humes made notes on pads; [redacted] sometimes Boswell made notes on the same sheets..."

Page 546: "The notes kept by the doctors were in scribbles, sometimes only a phrase to remind them of an entire event (sic)[:] "Blood & hair upper medias" "only a few in size 3-5 mm." "no missile in the wound" ... Doctor Humes leaned [redacted] across(sic)" [all from 17H29; notes on call to Perry !!!!)

Page 582: "Doctor Humes, in his preliminary notes (sic), courted the same easy conclusion; "The pattern was clear," he stated. "One bullet had entered the President's back and had worked its way out of the body during external cardiac massage, and a second [redacted] high-velocity bullet had entered the rear of the skull and had fragmentized prior to exit through the top of the skull" (This is the language of the Sibert-O'Neill Report, of course.!!!)

Page 644: "The Navy doctors removed their X-rays from the opaque screen and their notebooks from the autopsy table."
